

# Scoring model for the operating grants

The scoring model consists of five parts of which you can get a total of 100 points. Half points are not given. The result of the scoring model may be applied if necessary.

Documents needed for the score calculation are the action plan and budget of the current term, annual report, financial statements and the balance sheet of the previous term, as well as the list of current officials.

## Parts of the scoring model

**Part 1: Basic activities and size of the association, effect 28 points**

**Part 2: Number of activities, 20 points**

**Part 3: Diversity of activities, 20 points**

**Part 4: Communality of activities, 24 points**

**Part 5: Responsibility of activities, 8 points**

## Content of the scoring model and the method of calculation

### Part 1: Basic activities and size of the association, effect 28 points

#### 1.1. Number of members, 7 points

The number of members must be based on a membership register. If the number of members is based on any other than the registry, such as a mailing list, a multiplier 0.5 is used for calculating the number of members (number of members \* 0.5). At least 60 % but no less than seven of the voting members in the association must be members of the student union (Association Regulation). Only AYY's members in the association are taken into account. The scoring model uses a discrete scale, where the association gets all 7 points for 512 members and two points for 16 members. No points are given for less than 16 members. The scale progresses in a power of two. Doctoral students' association *Aallonhuiput* is an exception: three doctoral students at Aalto, who are not members of AYY, are equal to one AYY member.

#### 1.2. Number of active members, 2 points

A number of active members refers to the number of persons who run the association activities (board, officials, committees) and what kind of activities they engage in. Active members are checked from the list of officials, which must be submitted with the application.

#### 1.3. Documents and finances, 10 points

This section estimates the association's responsibility in financial management and the quality of operational documents. In addition, we take into account the association's economic dependence on AYY's support.

#### 1.4. Uniqueness of the association in Aalto community, 5 points

Uniqueness means that there are no several associations within Aalto community which engage in precisely same activities. Teams, spexes and choirs are considered exceptions.

#### 1.5. Association services provided for members, 4 points

This section takes into account all possible services provided for members, which are not directly part of the association's basic operations. These include, for example, rental of game shirts, coffee funds, sales services, magazine, club room and gym reservations.

## Part 2: Number of activities, 20 points

The number of activities measures the number of events in accordance with the events reported in the action plan. Activities are divided into leisure and non-profit activities due to their different nature. This section does not take any position on the type of activities or how often they are organised, this only takes into account the calculatory number of events and activities.

### 2.1. Leisure activities, 10 points

Leisure activities refer to so-called basic activities. Leisure activities include, for example, cultural or sports events, including game reservations, organising of parties, excursions and recreation days for association actors. In addition, we take into account activities that are typical for the association, which are not mentioned here. We only pay attention to the number of leisure activities.

### 2.2. Non-profit activities, 10 points

Non-profit activities are of a different nature in different associations. Non-profit activities include, for example, the reception of new students, national influence, interest group cooperation, advocacy work, international activities and social influence. We only pay attention to the number of non-profit activities.

## Part 3: Diversity of activities, 20 points

Diversity of activities is estimated based on the annual report and action plan. This section pays attention to issues which cannot be compared quantitatively and the extent and openness of the range of events, as well as the recruitment of members, easily accessible events, and how well the association carries out its mission. In this part, activities are also divided into leisure and non-profit activities due to their different nature. In the evaluation, we pay particular attention to the activities in the current year, especially if the diversity of activities has been significantly increased or reduced.

### 3.1. Leisure activities, 10 points

Leisure activities refer to so-called basic activities. Leisure activities include, for example, cultural or sports events, including game reservations, organising of parties, excursions and recreation days for association actors. In addition, we take into account activities that are typical for the association, which are not mentioned here. We only pay attention to the diversity and quality of leisure activities.

### 3.2. Non-profit activities, 10 points

Non-profit activities are of a different nature in different associations. Non-profit activities include, for example, the reception of new students, national influence, interest group cooperation, advocacy work, international activities and social influence. We only pay attention to the diversity and quality of non-profit activities.

## Part 4: Community of activities, 24 points

#### 4.1. Participation in AYY's activities and the building of Aalto community, 6 points

This section evaluates how the association participates in Aalto community. We take into account the participation in community events and the added value produced to all AYY members. In addition, we evaluate how the association participates in the construction of Aalto community through concrete measures.

#### 4.2. Interdisciplinarity, 7 points

Interdisciplinarity refers to the association's internal interdisciplinarity and its cooperation with other associations. All associations ranging from organisations within AYY to external organisations (e.g. HYY's organisations, national operators, unions, etc.) are considered as cooperative partners. Internal interdisciplinarity refers to the interdisciplinarity of the association members, operators and activities. Interdisciplinarity may take place between campuses, universities or study fields.

#### 4.3. Internationality, 5 points

We evaluate how international students and internationality are taken into account in association activities. Internationalisation means include, for example, communications in English and the organising of international events. In addition, we take into account whether the association has international students as members or actors.

#### 4.4. Openness and visibility, 6 points

Openness refers to the association's approachability. We evaluate whether it is easy to join association activities or if the association is strictly exclusive and whether the association invests in the recruitment of new members. Visibility means the association's visibility both in Aalto community and beyond. This includes, for example, tours, tournaments, appearances and various contests. We also appreciate active and open communications (e.g. Facebook, social media in general, utilisation of AYY's channels..)

### Part 5: Responsibility and influence of activities, 8 points

#### 5.1. Social responsibility and influence, 8 points

Social responsibility covers equality and environmental affairs, for example. Social action can refer to statements, charity or political influence, for example. In addition, we take into account the effectiveness in the association's own field through advocacy work, for example. In addition, the association's internal responsibility is important. Associations should take care of the well-being of members, for example.
